

Dream Car cost Project

The purpose of this project is to give you an opportunity to apply your understanding of computations with percents in making a decision about a relevant choice in your life. We will use this information later in the year when we discuss financing a car.

Research: Using the internet web sites provided, research your car. Your findings should include; color, options, reliability, safety, MSRP prices, invoice prices, TMV® (True Market Value) prices, destination charge, title/license fees, any extra advertising fees, and luxury tax if applicable. In addition, indicate any incentives and/or rebates. Please cite the sources for your information.

Title page: Using Publisher, Power-point, or Word and your creativity, design a page which summarizes the make and model of your dream car, and includes a picture. Write a paragraph explaining why you chose the car, including information about the reliability and safety of your car.

Pricing information page: Design a page summarizing the information that you have researched. Make a table that compares the MSRP, Invoice, and TMV pricing. Make one separate table summarizing extra charges and taxes, and another summarizing incentives and rebates.

Cost of car calculations page: Summarize the total cost of your dream car using information in the tables. Organize the costs in a table, and calculate the taxes **before** you add in the license/title fees. Determine the final cost of your dream car.
